PPC presents Locking HDMI Cable (30/7/2009)

CEDIA US Expo 2009

In the custom and professional installation industries, constant changes in technology, customer demands, and a turbulent economic climate provide challenges that seem to change every day. PPC, the worldwide leader in connective technology, believes that solution-based thinking is the only way to succeed in today's world. Solution-based innovation is what end-users crave in custom installation and products, and PPC believes that innovation is vital to creating solution-based products and services that enhance the end-user experience and increase the performance and profits of the custom installer.

PPC is the proven worldwide leader in the design and manufacture of connector technology for telecommunications, cable TV, satellite, and wireless industries around the globe. With more patents in connector technology than any other company worldwide, PPC has pioneered many of the advancements in use today by the cable TV, satellite, broadband, and wireless industries. PPC's innovations include the Universal Compression Connector, widely used by all major cable TV and satellite companies, the wireless compression connector for the wireless industry, and a high-retention series of locking HDMI connectors.

PPC at CEDIA Expo 2009:

At CEDIA EXPO 2009, PPC, whose innovative products are behind the wall in over 100 million homes, will present several new solution-based products built to address the needs of custom installers and their customers. PPC's consumer cables, which include the only patented locking HDMI cable to prevent loosening at the port, feature maximum performance and reliability driven by decades of innovation, product research, patent development, and customer commitment.

PPC Products on Display at CEDIA EXPO 2009:

PPC Locking HDMI Cable -- Superior High Quality Performance with Secure-Hold(TM)

Installers and end-users continue to find loose cables as a major problem in their HD experience. Imagine an HDMI cable with performance to 1080p and beyond that stays secure in the HDMI port, provides maximum picture quality 100 percent of the time, and reduces field service calls.

In keeping with its deserved reputation for innovation, PPC will highlight its unique Locking HDMI Cable, a patented locking device that grips a port with three times the strength of conventional connectors, enabling average port retention of 12 pounds. This exclusive cable not only delivers top quality HDTV video (up to 1080p) and audio (Dolby(R) Digital DTS-HD Master Audio and Dolby TrueHD), but also provides unsurpassed reliability. Additionally, the cable features the distinctive strength and flexibility afforded by PPC's Perfect Flex(TM) jacket, and can be installed easily without tools.

PPC Perfect Flex(TM) Line of Broadband Coaxial Cables -- Superior Electrical Performance, Micro-crack Resistant

With growing needs for coaxial cable use and higher demands on its performance, many installations have had to be corrected for damaged cable, or cable that needs to be rerun to transfer more data. Imagine the perfect future-ready cable.

The Perfect Flex(TM) line of Broadband Coaxial Cables incorporates PPC's extensive knowledge of the cable industry into a cost-effective, high-performance line of coaxial cable products. The Perfect Flex Coaxial Cable offers electrical performance of up to 3 GHz for future-ready installation; micro-crack resistance with superior flexibility; advanced corrosion inhibitors for lasting quality; ANSI/SCTE 74 2003 (SCTE specification for braided 75 Ohm Flexible RF Coaxial Drop Cable) and NEC compliance; and CATV and CATVR usability. Perfect Flex Coaxial Cables are also made from 100 percent RoHS compliant material, using the latest eco-friendly manufacturing processes.

PPC F-Type Coaxial Cable Interconnects -- Perfect for Self-Install, High-Quality, Tool-Free Cable

Getting the perfect picture from an in-home coaxial connection can be difficult. PPC's F-Type Coaxial Cable features an easy-to-see indicator that shows the user exactly when the optimal connection has been achieved.

PPC designed its F-Type Coaxial Cable to ensure a just-right connection -- not too tight and not too loose -- for a trouble-free signal. A true 75-Ohm connector with a copper center pin and interference protection, PPC's F-Type Coaxial Cable features an innovative, patented design with a unique, easy-to-see indicator to show when optimal connection has been achieved. An oversized locking nut supports easy, tool-free installation.

PPC Component Video -- Video Cable With Superior Conductivity, for Analog and HD

As TV technology continues to improve, only one cable has been designed to keep the video on the right path.

Optimized for 1080i HD video and beyond, PPC Component Video cables feature split-tip center contacts for high-quality signal transfer, a copper center for superior conductivity, and an expandable ground shield that accommodates a range of port sizes.

PPC Digital Audio Coax S/PDIF -- Flexible, Excellent Signal Transfer Without Data Loss

End-users can now choose from a huge variety of digital content, and have become accustomed to high-quality audio. This cable gives end-users what they want: perfect audio.

Providing optimal audio signal transfer of greater than 25 Mbps DVD audio without data loss, the Digital Audio Coax S/PDIF has split-tip center contacts for excellent signal transfer, and new, improved flexibility.

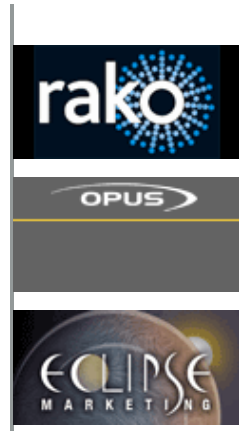

PPC Digital Audio Fiber-Optic TOSLINK -- Optimal Signal Transfer Fiber-Optic Cables, the Perfect Fit With Component Video

As fiber-optic use continues to expand, users want durable cables that provide optimal performance.

These fiber-optic cables are ideal for use with component video cables, providing optimal signal transfer and enhanced flexibility with the use of all-plastic fiber cores. They support in excess of 25 Mbps of DVD audio without loss of data.
