

Miniflex[®] Zipper Tool

Features & Benefits

- Lightweight
- Portable Handheld Tool (150 x 60 x 15 mm)
- Available for 5 mm 'Slit' Miniflex[®]
- Made from durable cast aluminium
- Single person operation
- No network downtime, work on cable in its original place
- Easily zip/un-zip over fiber cable
- Easy retrofit Miniflex Protection Tube to existing installations

Overview

The PPC Zipper Tool allows a slit version of the Miniflex protection tube to be 'zipped' onto pre-terminated cable and patch cords, as well as long lengths of fibre which cannot ordinarily be pushed into a protection tube. The Zipper Tool allows standard $\lt; \text{Ø}3\text{mm}$ optical fiber cable to be armor protected without the need to re-terminate and re-test the connectors. This is ideally suited for end user applications where termination has already been completed, or to existing cable infrastructure.

Applications

- Industrial Cabling
- Automotive Harnesses
- Cable Trays/Troughs
- Critical Data Networks
- Cable Repair
