

PPC QuikPass™ Window Cutter Tool

Features & Benefits

- Rugged anodized aluminum and stainless steel construction
- Safe to use, closed blade operation
- Precise, consistent cutting action
- Grips the cable securely
- Spring return feature
- Supplied in a rugged carry box

Compatibility List

- Miniflex® 8 mm Distribution Cable/Microduct

Overview

The PPC QuikPass™ Window Cutter is a simple-to-use tool for precisely cutting a 50 mm (2 in) wide window in the 8 mm Miniflex Distribution Cable. As part of the QuikPass solution, it allows individual 900µm fibers to be accessed, cut and retracted from the cable.

Where traditional cutting tools might struggle to cut through the tough outer jacket of Miniflex, the PPC QuikPass Window Cutter uses a lever action to cut through the tough polymer with ease. The tool grips and holds the cable in an arc profile with special retention features before making the window cut. This ensures the cut is consistent each time, as well as preventing potential damage to the optical fiber, which can occur with generic open-bladed tools.

Applications

- Multi-dwelling units
- Commercial offices
- Schools and campuses
- Hotels and resorts
